

AMKCO *Quick Change Screen Lift System*

Screen changes have never been easier or faster than with the versatile Quick Change Screen Lift system from AMKCO. The Quick Change Screen Lift system reduces screen changing to a simple one-man operation, greatly reducing labour costs whilst increasing safety and eliminating the need to involve busy plant maintenance personnel. Compared with manual disassembly, the Quick Change Screen Lift system reduces the time needed to change screens by up to 75%. Available as an option on all new AMKCO circular vibratory separators or as a retrofit kit this truly portable non-vibrating design utilises a pair of custom designed air operated lifting cylinders that can be simply “clipped” onto the frames of a circular type vibratory separator by utilising AMKCO’s patented clip plates.

The Quick Change Screen Lift system comes complete with control box mounted on a mobile trolley that also acts as a storage device for the air lift cylinders, safety bars & associated air hoses when not in use and allows the complete system to be simply wheeled from separator to separator. This innovative and time-saving system is available to suit most brands and variations of circular type vibratory separator ranging from a simple 750mm (30”) dia single deck unit right up to the largest multi deck 2100mm (84”) dia unit!
